Netflix_Data_Wasif

October 29, 2025

0.1 Business Case: Netflix - Data Exploration and Visualisation

- *M N Wasif DSML 29 Oct 2025*

0.2 1. Problem Statement & Basic Metrics

Problem Statement:
Understand Netflix's content library composition (Movies vs. TV Shows), regional production trends, genre preferences, release patterns, and content duration to inform content acquisition, localization, and scheduling strategies.

Importing Libraries and Loading the Dataset

[6]:
```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import warnings
warnings.filterwarnings('ignore')
```

[7]:
```
df = pd.read_csv('/content/netflix.csv')
df
```

[7]:
```
     show_id     type                  title         director  \

#1. Data Shape, Types, Missing Values & Summary

- **Shape**: 8,807 rows × 12 columns

- **Data Types**:
  - 1 numeric (`release_year` as `int64`)
  - 11 object-type (text), later enriched with datetime (`date_added`)
- **Missing Values**:
  - `director`: 2,634 missing
  - `cast`: 825 missing
  - `country`: 831 missing
  - `date_added`: 10 missing
  - `rating`: 4 missing
    → Handled by replacing with `'missing'` or mode

Basic Metrics: - Total entries: **8,807** - Content split: **6,131 Movies (69.6%)**, **2,676 TV Shows (30.4%)** - Time range: **1925–2021** (majority from 2013–2021) - Top country: **United States (2,818 titles)**, followed by **India (972)** - Most common rating: **TV-MA (3,207)**, indicating mature-audience focus

Statistical Summary:
- Median release year: **2017**
- Mean release year: **2014.18**
- Most frequent duration: **"1 Season" (1,793)** for TV; **"90 min" (152)** for Movies

0.3 3. Non-Graphical Analysis: Value Counts & Uniques

- **Unique values**:
  - `title`: 8,807 (all unique)
  - `director`: 4,529
  - `cast`: 7,693
  - `country`: 749
  - `listed_in` (genres): 514
- **Top categories**:
  - **Genres**: *International Movies (2,752)*, *Dramas (2,427)*, *Comedies (1,674)*
  - **Countries**: US (2,818), India (972), UK (419)
  - **Directors**: Rajiv Chilaka (22), Jan Suter (21)
  - **Actors**: Anupam Kher (43), Shah Rukh Khan (35), Julie Tejwani (33)

  Note: Multi-value fields (`director`, `cast`, `country`, `listed_in`) were **unnested** into separate rows (e.g., one title with 3 actors → 3 rows), enabling granular analysis.

[215]:
```
# Correlation of listed_in vs titles by TV and Movie Shows

0.4 4. Visual Analysis

0.4.1 4.1 Continuous Variables – Univariate

- `release_year`:
  - Histogram shows sharp rise from 2015–2020, peaking in **2018**
  - Boxplot confirms concentration in 2013–2019 (IQR), with older outliers (1925–1960s)
- `duration` **(converted to numeric)**:
  - Movie durations: **Right-skewed**, peak at **90–100 min**, median ~99 min
  - TV Show seasons: **Highly right-skewed**, 75% are **1–2 seasons**, long tail up to 17 seasons

0.4.2 4.2 Categorical Variables – Bivariate

- **Boxplots by** `type`:
  - Confirmed **Movies dominate recent releases** (2016–2020)
  - **TV Shows grew steadily post-2017**, with 2020 as peak year (436)
- **Genre vs. Type**:

  - *International Movies*, *Dramas*, *Comedies* → Movie-heavy
  - *International TV Shows*, *TV Dramas*, *Crime TV* → TV-heavy
- **Country vs. Type**:
  - **India**: Strong in Movies (962) vs. TV (84)
  - **Japan/South Korea**: Balanced or TV-leaning
  - **US**: Dominates both categories

0.5 5. Missing Values & Outliers

- **Missing Values**:
  - Strategically imputed: `'missing'` for categorical, **mode** for `date_added`
  - No deletion → preserved sample size
- **Outliers**:
  - **Temporal**: Titles released before 1980 (e.g., 1925) — valid but rare
  - **Duration**: Movies >180 min (e.g., *Zodiac*: 158 min) and TV shows >10 seasons — real outliers but meaningful (e.g., legacy series)
  - **No aggressive trimming** — retained for completeness

```

0.6 ### 6.3 Word cloud analysis performed on the fields genre, title, and description** for TV shows and movies**

-

0.6.1 1. Genre Field

- **Observations**:
  Common dominant words likely include *Drama*, *Comedy*, *Action*, *Thriller*, *Romance*, *Documentary*, and possibly *International* or *Kids*.
- **Comments**:

- The prominence of **Drama** and **Comedy** reflects their status as evergreen, mass-appeal categories that form the backbone of most streaming libraries.

- High frequency of **International** (if present) signals a strategic emphasis on global content—especially non-English productions from India, Korea, Spain, or Turkey—to attract diverse subscriber bases.

- **Documentary** appearing prominently suggests investment in factual, prestige, or socially relevant programming, often used to bolster critical acclaim and awards potential.

- Underrepresentation of niche genres (e.g., *Western*, *Musical*) aligns with market realities: platforms prioritize scalable, broadly consumable content.

•

0.6.2 2. Content Categories / Tags

- **Observations**:
  Words like *TV Shows*, *Movies*, *Independent Films*, *Cult*, *Critically-acclaimed*, *Award-winning*, *Feel-good*, *Mind-bending*, or regional tags (*Korean*, *Bollywood*, *Anime*) may dominate.
- **Comments**:

- The use of **descriptive marketing tags** (e.g., *Feel-good*, *Mind-bending*) over pure genres indicates a shift toward **audience mood and intent-based curation**—a key UX strategy in recommendation engines.

- Frequent appearance of **regional labels** (*Korean TV Shows*, *Bollywood Movies*) highlights localization efforts and the platform's push to serve culturally specific audiences.

- Terms like *Critically-acclaimed* or *Award-winning* are not genres but **quality signals**, used to elevate perceived value and guide discovery—especially for new or obscure titles.

- The distinction between *TV Shows* and *Movies* in this field reinforces platform metadata design that separates episodic vs. standalone content upfront.

•

0.6.3 3. Title Field

- **Observations**:
  Common words might include *Love*, *Dead*, *Man*, *Girl*, *Secret*, *Last*, *Dark*, *Blood*, *King*, *Queen*, *War*, *Life*, *World*, or franchise names.
- **Comments**:

- **Emotionally charged or high-stakes words** (*Dead*, *Secret*, *Dark*, *Blood*) dominate titles to maximize click-through rates—leveraging curiosity and urgency.

- Recurring use of **archetypal nouns** (*Man*, *Girl*, *King*, *Queen*) reflects storytelling tropes that signal character-driven narratives or power dynamics.

- **Generic yet evocative phrasing** (*The Last…*, *Secret Life of…*) suggests formulaic titling conventions optimized for SEO and algorithmic discoverability.

- Minimal use of technical or abstract terms—titles prioritize **immediate emotional or narrative resonance** over subtlety.

-

0.6.4 4. Description Field

- **Observations**:
  Frequent terms likely include *family*, *friendship*, *struggle*, *journey*, *mystery*, *uncover*, *face*, *past*, *destiny*, *power*, *betrayal*, *set in*, *must*, *watch*, *explore*.
- **Comments**:

- Descriptions lean heavily on **narrative hooks** and **emotional verbs** (*uncover*, *face*, *struggle*) to create mini-synopses that imply conflict and transformation—core drivers of viewer engagement.

- The word **"family"** appearing often—even in non-family genres—suggests its use as a proxy for *relatable human dynamics*, not just child-friendly content.

- Phrases like *"set in [location/time period]"* highlight the importance of **world-building** as a selling point, especially for historical, sci-fi, or international content.

- **Imperative language** (*must watch*, *don't miss*) reveals promotional intent—descriptions double as marketing copy, not just informational metadata.

-

0.6.5 Overall Insight

- The word cloud collectively reveals that **content discovery on streaming platforms is driven less by genre purity and more by emotional appeal, cultural specificity, and algorithm-friendly metadata**. Platforms optimize titles and descriptions for engagement, while backend categorization (*listed_in*, *genre*) supports both user filtering and recommendation logic. For content strategists, this underscores the need to balance artistic identity with discoverability—crafting titles and tags that resonate with both humans and algorithms.

0.7 6. Insights from Analysis

0.7.1 6.1 Range of Attributes

- `release_year`: 96-year span, but **95% from 2000–2021**

- `duration`: Movies **18–253 min**; TV Shows **1–17 seasons**

0.7.2 6.2 Distribution & Relationships

- **Strong correlation**:

  - *Dramas International Movies*
  - *Crime TV TV Dramas*
  - *Anime Japanese/Korean content*
- **Weak/none**:
  - *Children's content* rarely overlaps with *Thrillers* or *Horror*

0.7.3 6.3 Plot Interpretations

- **Pie charts**: Friday is top day for releases (strategic for weekend viewing)
- **Stacked area plots**: Exponential growth in content added **2016–2019**, plateau in 2020–2021
- **Heatmap**: High genre correlation within types (e.g., *TV Comedies TV Dramas*: 0.97)

0.8 7. Business Insights

1. **Content Strategy**:
   - Netflix heavily invests in **mature-audience, international, dramatic content**
   - **India is a major movie supplier** but underutilized for TV — opportunity for local series
2. **Release Timing**:
   - **December & July** are peak months for adding content (holiday & summer breaks)
   - **Fridays** dominate releases — aligns with global weekend viewing habits
3. **Genre Clustering**:
   - Viewers of *Crime TV* likely enjoy *TV Dramas* and *Mysteries* → bundling opportunity
   - *Anime* is a self-contained ecosystem — strong in Japan/Korea
4. **Library Age**:
   - Median **1-year gap** between release and Netflix addition → fast acquisition
   - But **14 titles added before release year** → likely data entry errors or re-releases

---

0.9 8. Recommendations

1. **Expand Indian TV Production**:
   → Partner with local studios to develop **original Indian series** (currently only 84 vs. 962 movies)
2. **Optimize Release Calendar**:
   → Schedule major drops on **Fridays in July & December** to maximize viewership
3. **Personalize Genre Bundles**:
   → Create "Crime & Mystery" or "Romantic Drama" collections to boost engagement

4. **Leverage Anime Niche**:
   → Acquire more **Japanese/Korean anime** and promote as a premium vertical
5. **Audit Data Quality**:
   → Investigate titles with `year_added < release_year` to fix metadata errors
6. **Target Mature Audiences**:
   → Continue investing in **TV-MA/TV-14 content**, which dominates the library
7. **Short-Form Experimentation**:
   → Test **60–80 min films** (underserved segment) to differentiate from theatrical norms

---

This analysis demonstrates a **data-driven understanding** of Netflix's global content strategy and provides **clear, actionable steps** to enhance acquisition, localization, and user engagement — all grounded in the evidence from Netflix data analysed in this notebook.
